

Purpose

To provide standardized, step-by-step- instructions for conducting oven certifications

Pre-Visit Setup Instructions

1. Observe condition and temperature of all dough and ingredients that will be used during the Oven Certification, ensuring everything is prepped to the proper size, not expired, and is at the appropriate temperature
2. Identify the total number of ovens in the store
3. Perform all certification steps for each **individual** oven deck

Part A: Data Collection

1. Belt Speed Measurement

1. Using a double stack of pizza disks, time the belt speed for all belts.
2. Start a timer once the back of the disks fully enter the bake chamber.
3. Stop the timer once the back of the disks fully exit the bake chamber
4. **Record** belt speed for each deck. 📝
5. **Record** if actual belt speed meets standard. 📝

2. Oven Identification

1. **Record:** 📝
 - Oven **make** by deck
 - Oven **model** by deck
2. Take a **photo** of each oven nameplate. 📷
3. **Record:** 📝
 - Belt speed setting by deck (as shown on oven display)
 - Temperature setting by deck (as shown on oven display)

3. Oven Condition

1. Inspect cleanliness and condition of oven fingers, and all remaining oven components. Reference oven finger condition images found in **Oven Finger Guide**.
2. **Record:**
 - Dirt or debris buildup that may impact oven performance (clogged or covered holes)
3. Capture **notes** and **photos** as needed. 📷 📝

4. Oven Finger Arrangement

1. Using the **Oven Finger Guide**, inspect oven fingers from the side window, looking up and down into the oven
2. **Compare** finger configuration to the official diagram.
3. **Are the oven fingers arranged correctly?**
 - ✓ **Yes** → proceed
 - ✗ **No** → take **photo** and **record** discrepancy. 📷 📝

5. Hood Functionality

1. Verify the **hood** is operational using one/both methods:
 - **Listen** for hood operation
 - Hold a piece of paper near the **hood filters**. Confirm suction by observing paper adherence.
2. **Record** result as **Yes / No** 📝

Part B: Oven Calibration

Oven Calibration Process Overview

1. Ensure pan pizzas are prepped for each oven deck
2. Bake Hand Tossed & Sandwich; temp + grade to identify baseline
3. Use temps + grades to determine if oven calibration is needed
4. Adjust oven to improve bake color while meeting food safety standards
4. After adjustment (if needed), bake and record remaining items (thin crust and pan)
5. Capture peak temperatures and color grades for all items

Reference

Oven Belts

1. Bake & Evaluate Large Hand Tossed Pepperoni

Pre-Bake Process

- 1) Stretch a **large** dough ball to size
- 2) Place hand tossed dough on disk or screen
- 3) Apply 6.0 OZ Pizza Sauce, 7.0 OZ Pizza Cheese, and 40 Pepperoni
- 4) Place in oven to bake

*Refrigerated ingredients' pre-bake temperatures must be 33-41°F

HAND TOSSED LARGE CHEESE

Quantity: 1 per belt

PORTIONS

PIZZA SAUCE	6.0 OZ
PIZZA CHEESE	7.0 OZ
PEPPERONI	40

Load Process

- 1) Load pizza in the **Middle** of the oven.
- 2) Repeat process for each belt (**Oven 1** **Oven 2** **Oven 3**)

Post-Bake Process

- 1) **Remove** pizza from oven once it exits the bake chamber, do not pull early.
- 2) Take the **temperature** in the center of the pizza, underneath cheese, and into the dough.
- 3) **Record 1 center temperature** 🌡️
- 4) Take a top-down **photo** of the top of product with temperature displayed 📷
- 5) Take a top-down **photo** of the bottom of product 📷
- 6) **Record bake grade number** on form 📝

2. Bake & Evaluate Buffalo Chicken Sandwich

Pre-Bake Process

- 1) Place a silicone baking mat and 12" x 12" parchment on a 12" disk
- 2) Apply 0.20 oz. of butter flavored oil directly to the parchment
- 3) Carefully open bread and place open-face on top of butter flavored oil. (only select bread that is a minimum of 7 inches)
- 4) Itemize to standard, place in oven to bake

*Refrigerated ingredients' pre-bake temperatures must be 33-41°F

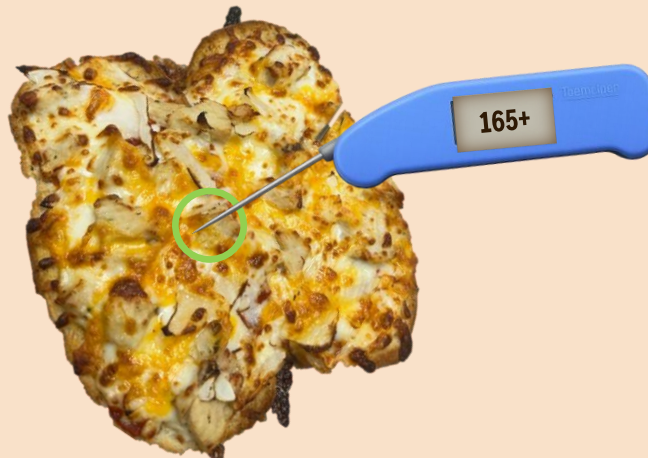

Buffalo Chicken	
Quantity: 1 per belt	PORTIONS
Hot Buffalo Sauce	0.7 OZ
Ranch	1.0 OZ
Pizza Cheese	1.0 OZ
Chicken	2.5 OZ
Onion	0.5 OZ
Cheddar Cheese Blend	1.5 OZ

Load Process

- 1) Load sandwich in the **Middle** of the oven.
- 2) Repeat process for each belt (**Oven 1** **Oven 2** **Oven 3**)

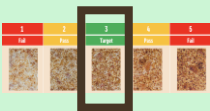

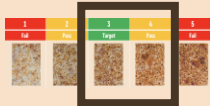

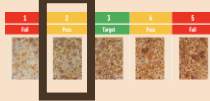

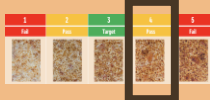

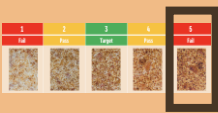

Post-Bake Process

- 1) Remove sandwich from oven.
- 2) Record 1 temperature in the center of the largest piece of chicken 
- 3) Take a top-down **photo** of the product with the temperature displayed 
- 4) Document temperature on form 

3. Decide On Next Steps

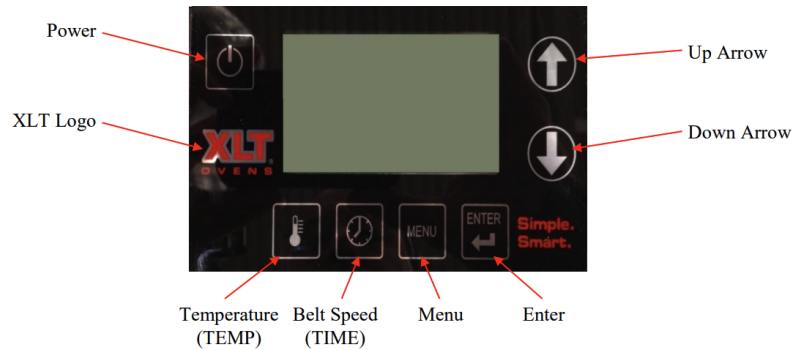

Follow the decision tree to determine next steps in the oven certification process:

	Hand Tossed Color Grade	Sandwich Center, Largest Piece Temperatures	Next Step
 Pass	3 	$\geq 170^{\circ}\text{F}$	Move onto step 5
 Adjust Oven	3 or 4 	$< 170^{\circ}\text{F}$	Ensure belt speed is set to standard. If not, adjust to standard time, and lower temperature setting by 5 degrees per 15 seconds added to achieve standard
	2 	Regardless of Temperature	If belt is set to standard time, increase temperature setting by 10 degrees
	4 	$> 170^{\circ}\text{F}$	Ensure belt speed is set to standard. If not, adjust to standard time, and lower temperature setting by 5 degrees per 10 seconds added to achieve standard
	5 	$> 170^{\circ}\text{F}$	If belt is set to standard time, decrease temperature setting by 5 to 10 degrees

Next Step If Adjusting Oven

- Follow instructions to adjust oven settings in step 2.4. Afterward, repeat steps 2.1 and 2.2 to verify improvements to Hand Tossed and/or sandwich temperature $\geq 170^{\circ}\text{F}$. Then proceed with steps 2.5 and beyond to complete the certification.
- If it is not possible to get a passing grade & temperature, return oven to original settings and contact **your Business Consultant** for further direction.

4. Adjusting Oven Settings

- ① **TURN ON:** Hold the Power Button for one (1) second. Press the Enter button to confirm oven start up.

Temperature Adjustment

- ② **TEMPERATURE ADJUST:** Press TEMP button for three (3) seconds. To adjust temperature use either the Up or Down arrow. If double burner press the TEMP button to toggle between burner temps. Press Enter to save.

Belt Time Adjustment

- ③ **BELT TIME ADJUST:** Press TIME button for three (3) seconds. To adjust belt time use either the Up or Down arrow. If split belt, press the TIME button to toggle between belt times. Press Enter to save.

- ④ **TURN OFF:** Hold the Power Button for one (1) second.

CHANGE TEMPERATURE (MANUAL Mode)

CHANGE BAKE TIME (MANUAL Mode)

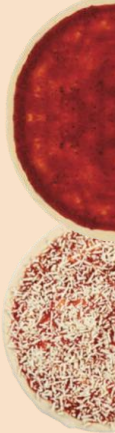

5. Bake & Evaluate Large Thin Crust Cheese

Pre-Bake Process

- 1) Place **large** thin crust on one metal disk
- 2) Itemize to standard
- 3) Place in oven to bake

*Refrigerated ingredients' pre-bake temperatures must be 33-41°F

Thin Crust Cheese - Large

Quantity: 1 per belt

PORTIONS

Pizza Sauce

6.0 OZ

Pizza Cheese

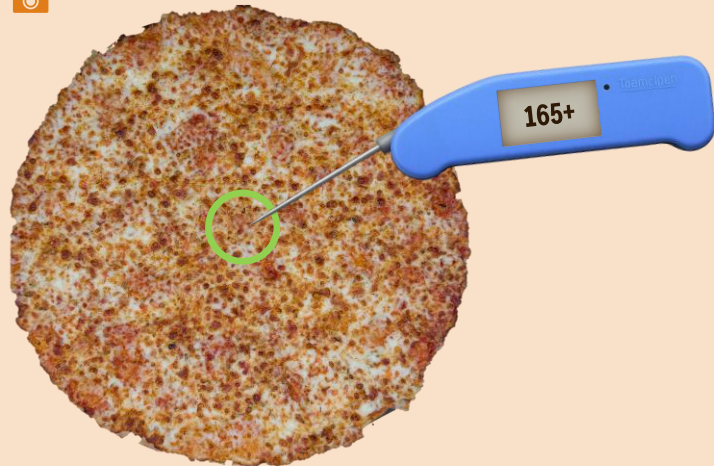

10.5 OZ

Load Process

- 1) Load pizza in the **Middle** of the oven.
- 2) Repeat process for each belt (**Oven 1** **Oven 2** **Oven 3**)

Post-Bake Process

- 1) **Remove** pizza from oven once it exits the bake chamber, do not pull early
- 2) Take the **temperature** in the center of the pizza, underneath cheese, and above the crust
- 3) **Record 1 center** temperature 
- 4) Take a top-down **photo** of the product with temperature displayed 
- 5) Take a top-down **photo** of the bottom of product 
- 6) Record bake grade number on form 

6 Bake & Evaluate Pan Hawaiian

Pre-Bake Process

- 1) Follow the proper pan prep and stretch process
- 2) Recommended to let the pan dough proof in the pan for 1-2 hours (depending on remaining shelf life) for better bake
- 3) 4.0 OZ Provolone Cheese, 3.0 OZ Pizza Sauce, 3.0 Pizza Cheese
- 4) Itemize to standard, place in oven to bake
- 5) *Refrigerated ingredients' pre-bake temperatures must be 33-41°F

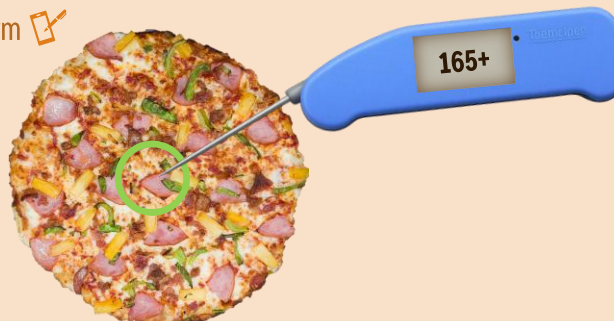

Pan Hawaiian	
Quantity: 1 per belt	PORTIONS
Provolone	4.0 OZ
Pizza Sauce	3.0 OZ
Pizza Cheese	3.0 OZ
Ham	18
Bacon	1.5 OZ
Pineapple	1.5 OZ
Green Pepper	1.0 OZ

Load Process

- 1) Load pizza in the **Middle** of the oven.
- 2) Repeat process for each belt (**Oven 1** **Oven 2** **Oven 3**)

Post-Bake Process

- 1) **Remove** pizza from oven once it exits the bake chamber, do not pull early
- 2) Take the **temperature** in the center of the pizza, underneath cheese, and into the dough
- 3) **Record 1 center** temperature 🌡️
- 4) Take a top-down **photo** of the product with temperature displayed 📷
- 5) Take a top-down **photo** of the bottom of product 📷
- 6) Record bake grade number on form 📝

Part C: Completion

- 1) If oven settings changed, adjust PULSE oven time settings to accommodate.
- 2) Confirm all ovens, products, temperatures, photos, and grades are recorded.
- 3) Conclude the visit once grading is complete.
